

Any pc from an XT 8088 to a WINXP machine with MSYS.EXE set to win95 compatibility mode will run MSYS.

Best with a minimum of a 386 w/2Meg Ram and two serial ports. Will run in win(98SE .. WinME has proven difficult, but may work when msys.exe is set to win95 compatibility mode WinXP will run MSYS if MSYS.EXE is set to Win95 Compatibility Mode.
